Our teams and what they do

Highways Infrastructure – Road Safety

As a valued member of our Transportation Highways and Active Travel team you'll be working on helping to remove and reduce collisions on the road network.

Upon joining the Road Safety team within Highways and Active Travel you'll gain experience of collision investigation and prevention work, safety risk assessments, road safety audits and more.

Road safety is at the heart of road design, which comprises everything from major projects to cycleway schemes to maintenance and renewals works, right from conception through to construction and operation. You'll experience a variety of projects in this role, and interface with multiple disciplines including highways, bridges and active travel. You'll work as part of a team tasked with transforming transport infrastructure while providing net-zero emissions, helping to achieve the UK's sustainable development goals.

Not only will you gain technical knowledge in road safety, but in this varied role you will develop management, commercial and leadership skills. We offer opportunities to carry out exciting secondments to gain a better understanding of the project lifecycle, including project management, winning work or construction.

We work collaboratively across the country, so you'll be involved in projects with colleagues from a variety of backgrounds and cultures. As AtkinsRéalis is a global company there may be opportunities for overseas working.

The scheme will enable successful candidates to develop towards chartered status or incorporated status, or membership with a relevant institution such as the ICE, CIHT or SaRS.

Locations for this team:

Derby and Nottingham
